 - <http://www.wideye.com.sg>
 - Click on “Support” to go to the firmware download options
2. Use the SAFARI's Web MMI (WebConsole) to upgrade the new firmware.

Enhancements and bug fixes in this release

The enhancements and bug fixes to this release (compared to the earlier firmware release R01.1.1) include the following:

- Enables the features such as *Fax, Fleet Tracking and Firewall* by default, without having to activate them using individual activation codes.
- Includes Japanese as an additional language for WebConsole.
- Includes an option via WebConsole to select external GNSS (Global Navigation Satellite System) input.
- Includes HTTP redirection:
 - This feature, when enabled, will give a warning page to the web-browsing users about the high data cost associated with the satellite link before he/she decides to continue.
- Includes general improvements and bug fixes on the Fleet Tracking feature.
- Fixes a bug that prevents WebConsole from loading up properly for user accounts that are created using multi-user access feature.
- Fixes a bug related to “Auto-PDP activation” (Always ON) which sometimes does not work when Fleet Tracking is active.
- Fixes a bug related to PPPoE not showing any error while inputting invalid service name.

FIRMWARE RELEASE NOTES

- Fixes a bug that causes default language not being selected on the WebConsole after 'Factory Reset'.
- Fixes a bug that causes Primary Handset not able to load some of the contents (such as APN, SMS, etc.) during power up.

NOTE: Please contact support@wideye.com.sg for more details on any of the information stated in this firmware release notes.
