

## **Mackay Supplied New Inmarsat Multi-Voice Service for FleetBroadband**

Do you remember when Inmarsat Fleet-77 provided up to 6 voice lines and you could call, or be called by the bridge, Captain's day room, the Ship's office, the Chief Engineer's office, or even the ECR? But you were disappointed when you found out Inmarsat's shiny new FleetBroadband service only provided one voice line? And then do you remember the frustration you felt several years later when Inmarsat introduced FleetBroadband Multi-Voice with up to 8 voice lines for a small one-time fee in finding you could not call the additional numbers – they could only be used for outbound calls? Finally, the limitations have finally been removed and Mackay, for a one-time SIM provisioning fee, now supports and provides Inmarsat Multi-Voice Service for FleetBroadband customers with fully duplex voice service: 8 numbers on an FB500, 6 numbers on an FB250 and 4 numbers on an FB150.

These additional multi-voice numbers:

- Can be assigned to individual handsets – either VoIP or analog
- All of them can be concurrently used for both inbound and outbound calls
- Provide the same high-quality voice service Inmarsat FleetBroadband is known for
- Can be used with the FleetBroadband's internal telephone switch for no charge intra-ship voice calls
- Allow the transfer of satellite voice calls between handsets
- Have individual calling restrictions assigned (i.e. one line can be restricted for crew calling card use only)
- Take advantage of Inmarsat's highly discounted add-on voice bundles
- Provide a separate voice line to the ship's anti-piracy citadel
- Can be used to provide service to an external phone pbx if one is available
