

**PRESS RELEASE – For Immediate Distribution – August 19, 2021**

---

**Seall, A Marine Technology Company, Expands with Key Global Partner, Mackay Marine**

**August 19, 2021**.....Aberdeen, Scotland-based Seall, has secured a partnership with global marine electronics and service provider, Mackay Marine, to distribute Seall's suite of innovative software solutions and products to the maritime industry, as they expand their worldwide footprint.

Mackay Marine, headquartered in North Carolina, USA, has 50 locations in 16 countries, making it Seall's largest distribution partnership agreement to-date. Seall will work with Mackay to build and scale their offering across their network of partners and customers. Mackay Marine is a leading electronic equipment, satellite communications, and onboard service provider for marine, offshore, and land-mobile applications.

Seall engineers have internally designed a combination of robust software and products to enhance bridge navigation safety and efficiency via multi-overlay, interactive data display solutions. Seall's *ENC Kernal SDK* is the core software platform that powers their *ECS* navigation software, the *Passage Planner* program, hardware/software *TAB* (tablet), and user-friendly *ECDIS* System. The *ENC Kernal* has been described as 'the best technical solution in its field'.

This alignment is the latest of seven new distribution partnerships Seall has secured in the last six months. Previous geographies include Mexico, USA, Cyprus, The Netherlands, India, and Turkey. Access to more markets in Asia, Europe, Middle East, South Africa, Canada, and Latin America will be achieved through the Mackay partnership.

Barry Booth, CCO of Seall stated, "This strategic partnership reflects our vision to scale the company by working collaboratively with a key partner in a broadened international market, while providing opportunities for future-proofing and refining Seall's adaptive technology. This arrangement will enable us to expand into more demographics and help identify solutions that suit the needs of the industry, whilst adhering to compliance and regulations."

Seall's team of software and I.T. specialists' usage of intuitive technology, simplifies and streamlines the way data is displayed, used, and shared from shore-to-ship-to-shore. Their *ECDIS* solution has been heralded as one of the simplest systems to operate on the market.

"Mackay looks forward to enhancing our portfolio with Seall's innovative *ECDIS/ECS* solutions which can be distributed to a far wider selection of maritime & offshore industries," commented Nick Pope, Managing Director Europe & South Africa and *Mackay World Service*.
