NAVpilot

GC-001

NAVpilot-300

NAVpilot-711C

FLSI's trademarked self-learning, adaptive software is developed by a full-time research and development team.

KEY FEATURES:

- ▶ Self-Learning and adaptive software; each time the boat goes to sea, the software learns the sea conditions and calculates the best adjustment for smooth steering
- ▶ Fantum Feedback™ offers simplified installation while delivering enhanced steering control - no need for physical rudder feedback unit
- ▶ Volvo Penta IPS, Yamaha Helm Master™, Yanmar, and Seastar VCS compatible
- ▶ Easy installation and smart network-based system configuration
- ▶ Waterproof Processing Unit (IP55) and Control Unit (IP56, IP65/67 for GC-001)
- ▶ Optional revolutionary SAFEHELM2 and POWER ASSIST brings unrivaled steering control and comfort to the helm
- ▶ Selectable "Economy" and "Precision" Navigation Modes combine adaptive technology, providing fuel and power savings of 2.5% or more*
- ▶ "Precision" provides tighter course keeping, within 0.01 NM of the set course
- ▶ Perfect for inboard or outboard power boats and sail boats (NAVpilot-711C only)
- ▶ Autopilot control available from NavNet TZtouch3/TZtouch2/TZtouch/GP-1871 F/197 1F
- ▶ NEW! FishHunter™ Drive delivers new control features for boaters utilizing select Suzuki outboard models (NavPilot-300 only)

* Based on Furuno testing and "Scenarios for a Clean Energy Future 2000" - U.S. Department of Energy (<https://www.nrel.gov/docs/fy01osti/29379.pdf>)

Remote Navigation In The Palm of Your Hands (NAVpilot-300 only)

The Gesture Controller is a revolutionary and unique way to steer your boat remotely. By using Bluetooth signals, it is possible to control the Autopilot from anywhere on the boat within 10 meters. Just push and hold the button, point to the desired heading, and release the button to let the Autopilot redirect the boat!

New SAFEHELM2 Reimagines Helm Control and Autopilot Safety

The optional SAFEHELM2 and POWER ASSIST features provide a unique interface to the vessel's hydraulic hand steering system, providing unrivaled comfort and control of steering directly from any manual helm on the vessel. These two modes greatly reduce steering effort and enhance the safety of your autopilot. The POWER ASSIST mode incorporates the SAFEHELM2 concept and provides speed-based, power assisted steering, which greatly reduces manual helm effort in maneuvering situations. POWER ASSIST is a unique helm-activated assisted steering feature that can augment or replace separate electric and power-robbing, engine-driven power steering systems on many vessels. POWER ASSIST reduces steering system complexity and costs while increasing fuel economy.

Compatible with EVC Engines

The NAVpilot-300/711C have the capability to work with Volvo Penta IPS* (drive versions C, D, or E type), Yamaha Helm Master™, Yanmar 8LV engine systems**, and the Seastar Optimus360 Joystick** system.

* Requires the optional F300RS to connect with NAVpilot-300/711C.

** Requires the optional FWR1802 to connect with NAVpilot-300/711C.

FishHunter™ Drive for Suzuki Outboards

Speed Control	The boat will maintain a constant speed, adjusting engine RPM as needed to account for changes in wind and tide.
Route Smoothing™	Decreases the speed of turns at waypoints while navigating an active route. Reducing speed when executing a turn helps keep the vessel on course.
Point Lock™	Allows the vessel to easily maintain a fixed position by controlling the rudder and throttle, countering the effects of wind and tide, which are constantly working to move the boat. An invaluable tool for anglers to maintain a fixed position while fishing a wreck or reef, and for boaters who occasionally just wait for a bridge to open so they can pass.
Auto Stop On Arrival	The NAVpilot-300 automatically stops the vessel at the destination waypoint. When combined with the Point Lock™ feature, Auto Stop On Arrival allows the vessel to maintain a fixed position at the destination waypoint.
SABIKI Lock™	Expands upon the NAVpilot-300's SABIKI™ functionality by controlling both the rudder and throttle to maintain position, freeing the angler to focus 100% on jigging and other vertical fishing.

Autopilot Control from NavNet TZtouch Series and GP-1871F/1971F

Furuno's NAVpilot Series are designed to match the GPS Chart Plotter GP-1871F/GP-1971F, the NavNet TZtouch Series, and other Furuno navigation equipment. The Plug and Play CAN bus interface allows for easy installation and exceptional interfacing.

SABIKI™ Mode for NAVpilot-300 and NAVpilot-711C

SABIKI™ mode lets the Autopilot take control while you are drifting astern so you can focus on fishing instead of steering. When moving astern at a slow pace, SABIKI™ mode is uniquely tailored for SABIKI fishing, jigging and bottom fishing. In order to maintain heading it is not sufficient to just reverse the engine and move astern. The steering has to be constantly adjusted in order to hold your heading. With SABIKI™ mode turned on, the direction can be kept just by adjusting the throttle. SABIKI fishing requires a bit of technique and (whether you just started or have considerable experience, SABIKI™ mode will help you catch the bait fish needed for the big catch.

Display Options for Day and Night

Several types of graphic displays are available, allowing you to customize the data to suit your own preferences with either digital or analog graphics. The NAVpilot-300 and NAVpilot-711C feature a color day/night graphic display, giving you better sunlight visibility during the day, while not affecting your night vision when the sun goes down.

NAVpilot Offers Self-Learning and Adaptive Software

From the first dockside setup through the last voyage you made, NAVpilot continues to learn your vessel's steering characteristics. This allows dynamic adjustments to the boat's steering for vessel speed, trim, draft, tide and wind effects, weather, etc. These characteristics are stored in the processor's memory where they are continuously optimized to make the NAVpilot more versatile.

Auto

Maintains the desired heading, but the vessel may drift off course due to the effects of tide and wind.

Advanced Auto

Maintains the desired heading while compensating for the effects of tide and wind.

SABIKI™

Maintains the desired heading astern while compensating for the effects of tide and wind. Speed is limited to 5 knots.

Navigation

Steers the vessel towards the current waypoint while compensating for the effects of tide and wind.

Navigation

When connected to a GPS navigator, NAVpilot steers the vessel to follow a series of waypoints in succession. Upon arriving at each waypoint or destination, audible or visual alerts are activated.

Wind*

Maintains the desired heading toward true or apparent wind direction while compensating for the effects of tide and wind.
*Sailing craft only with proper wind data input

FishHunter™

Square

Zigzag

Orbit

Figure 8

Spiral

The NAVpilot will activate the FishHunter™ to perform various maneuvers around the target at a user-selected distance. The feature can also be used for Man Overboard (MOB).

INTERCONNECTION DIAGRAM

INTERCONNECTION DIAGRAM

Control Unit (Type: MAX, E)
The processor unit has two bus channels for the unit control. Three control units can be connected per each bus line.

*1 Termination resistors must be installed at both ends of the backbone.

*2 VOLVO PENTA IPS, YAMAHA Helm Master, YANMAR VCR3, SEASTAR SOLUTIONS OPTIMUS

*1 Attach the terminator (type: BD-07AFFM-LR7001) to the port not used on the last control unit in the series.

*2 Not required for Fantem Feedback™.

*3 Not required for a EVC system equipped vessel.

*4 Connect one Dial-type Remote Controller FAP-5511 to one Distributor FAP-6000.

*5 VOLVO PENTA IPS, YAMAHA Helm Master, YANMAR VCR3, SEASTAR SOLUTIONS OPTIMUS
